$$F_{Sx} \coloneqq 1 \ N$$

Abscherung & Biegespannung am Bolzen der Absteifstange:

Angabe:

 $d \coloneqq 6 \ \boldsymbol{mm}$

 $F_w \coloneqq 6.637 \ N$

 $a \coloneqq 2050 \ \mathbf{mm}$

 $r \coloneqq 3 \ mm$

 $b = 2912.26 \ mm$

Skizze:

Berechnung:

$$\varSigma M_B\!\coloneqq\! F_w\!\cdot\! b\!+\!F_{Sx}\!\cdot\! a$$

$$F_{Sx} \coloneqq \frac{F_w \cdot b}{a} = 9.429 \ N$$

$$F_S = \frac{F_{Sx}}{\sin(55^\circ)} = 11.51 \ N$$

$$\tau_a \coloneqq \frac{F_S}{r^2 \cdot \pi} = 0.407 \; \frac{N}{mm^2}$$

$$W := \frac{\pi}{16} \cdot d^3 = 42.412 \ mm^3$$

$$M_b \coloneqq \tau_a \cdot W = 17.265 \ \textit{N} \cdot \textit{mm}$$

$$\sigma_{B} \coloneqq \frac{M_{b}}{W} = 0.407 \; \frac{N}{mm^{2}}$$
